

SILMACO HARDENER 302 AC

The Silmaco Hardener 302 AC has especially been developed to be easily mixed within a NA340-3840 sodium silicate solution and to harden the 340-3840 solution in a homogenous way. Especially attention has been paid to prevent the solidified silicate to create corrosion towards galva elements.

The Silmaco Hardener 302 AC shows following characteristics:

	<i>Measured value</i>	<i>Unity</i>	<i>Méthod</i>
Density @ 20°C	1.085 – 1.115	g/cm³	DMA Anton Paar
Viscosity @ 20°C	10 – 20	cP	RheoLabQC Anton Paar
pH	6 – 8	<i>/</i>
